Cranial nerves figure 7- 9 answers key pdf free full

I'm not robot!

Cranial nerves figure 7- 9 answers key pdf free full

Changes in the protein structure or level of expression may lead to changes in cellular properties and behavior, as a result, the organism is affected. Ribonucleic Acid polymerase enzyme binds and opens the DNA molecule that will be transcribed. Other workers known as amino acids, bring parts to the factory. For example, the reproductive organs of the male and female are developed from the same embryological structures, and some hormones are commonly found in both male and female, in varying quantities and produce different responses The Male Reproductive System Examine the diagram of the male reproductive system. Identify the complementary sequence of bases in the other strand of DNA. How does a tRNA molecule carrying its amino acid recognize which codon to attach? This is attained through the regulation of the bodily functions by the endocrine and nervous systems. Compare the two new strands of DNA. What might happen to a person whose nervous and endocrine systems fail to maintain homeostasis? Axons can be grouped together into cable-like bundles called nerves. 40. It is therefore important to maintain a positive outlook in life and remember that these changes are only temporary and will stabilize with time. These hormones keep the reproductive system properly functioning. Do not tape across base pairs. How does your nervous system work? As the message reaches the brain, it processes the information and commands an effector such as a muscle or an organ to respond. Mutations can occur in two different types of cells: reproductive cells and body cells. Ventura Photo Credits: Herma D. Why does the menstrual cycle stop during menopause? Neuroscience. D EPED C O PY 271 Do you understand the process by which DNA copies itself? Once the video is finished, you may already present it in front of the class for evaluation. Hormones act in very small amounts. TRANSLATION The DNAdirects the production of proteins and determines the formation of mRNA. Although these two etimsnart elE .seic©Ãpse sad aicnªÃviverbos a arap o£Ã§Âudorper ad medneped sonamuh seres so ,aviv asioc artuo reuqlauq omoc ,otnatne oN .III 823 ----- ---------- megazidnerpA ed sovitejbO/saicnªÃtepmoC .A nimrA .rB :o£Ã§ÃacudE ed otnematrapeD od oiriÃterceS olep odacilbuP .soin´Áruen ed sadamahc o£Ãs sasovren salul©Ãc sA .adauqeda medro an 01-1 soremºÃn so riuges atsaB .edadivita etniuges a ratucexe edop iÃj ªÃcov ,onamuh onirc³Ãdne ametsis od saludn¢Ãlg setnerefid sa moc odazirailimaf iÃtse ªÃcov euq arogA 242 YP O C DEDED .oproc o odot rop agerrac so euq ,aenÃugnas etnerroc an soin´Ámroh omoc sodicehnoc socimÃuq sotudorp materces sanirc³Ãdne saludn¢Ãlg sA .oproc osson od o£Ã§Ânuf e so£Ãgr³Ã ,salul©Ãc sa ṣadot esauq matefa euq soin´Ámroh ed sopit setnerefid materces euq saludn¢Ãlg ed otsopmoc ©Ã onirc³Ãdne ametsis O onirc³Ãdne ametsis od onirc³Ãdne ametsis od o£Ã§Ânuf A .4 racºÃ§Âa ed opiT .4 662 YP O C DED .siaroproc sossecorp so aluger e alortnoc onirc³Ãdne ametsis o ,osovren ametsis oa etnahlemeS 042 YP O C DED .edadrebup ad oicÃni on sa§Ânadum sa e otnemicserc osson malortnoc euq seleuqa omoc ,ozarp ognol a sotiefe mªÃt soin´Ámroh sortuo otnauqne ,ozarp otruc ed sotiefe mªÃt soin´Ámroh snuglA .soin´Áruen so ertne o§Ãapse o mazurc euq serossimsnartoruen arebil oin´Áruen od oin´Ãxa o etnemoS .odal a odal ANR e AND od sesab ed aicnªÃuqes a odnacoloc ,ANR ed ogid³Ãc me ẓudart es AND ed ogid³Ãc o omoc ertsoM .53 .laurtsnem olcic on soin´Ámroh ed o£Ã§Âudorp a atefa ovitagen kcabdeef mU .orber©Ãc ues oa rod ed megasnem amu marebil elep aus me sovren so ,soded so racip etnemlatnedica e asor ed etsah amu raruges ªÃcov es ,olpmexe roP ?airiÃtiutip aludn¢Ãlg ad otnemicserc od soin´Ámroh ed avissecxe o£Ã§Âerces moc aossep amu a iÃrecetnoca euq O .odavresbo iof euq lanomroh oirbÃliuqesed od otiefe o euqilpxe e o£Ã§Ânufsid adac me odivlovne iÃtse onirc³Ádne ametsis on aludn¢Ãlg lauq euqifitnedI .etnematerroc enoicnuf oproc o euq ritimrep arap adanedrooc arienam ed sotnuj mahlabart sele ,setnerefid o£Ãs sonif sonif sovren me etsisnoc e satsoc salep orber©Ãc od ednetse es euq ,lahnipse aludem ad s©Ãvarta for each ³ and part of the body. Guide Questions: Q3. Quick processes, such as body movement and breathing, are controlled by the nervous system. The tRNA anticod is paired with the first cod of argenine-uracil-guanine mRNA (inÃcio), to form the start complex. D EPED C O PY 261 References and links Rabago, L., et al (2010). Functional Biology - Modular Approach. The American geneticists George Beadle and Edward Tatum established the connection between genes and enzymes. Q18. Figure 2. ÂÂÂ¢ The nervous system has two main µ, which are the Central Nervous System (CNS) and the Peripheral Nervous System (PNS). D EPED C O PY 258 ÂÂ ¢ Hormones affect various processes in the body. measures that regulate and balance the functioning of ³, tissues and squid. Influence female characteristics and support reproductive fun 8. A pregnant woman A boy fleeing danger 2. Source: www.shmoop.com Figure 8. Can't you imagine a car being mounted in a car factory? While in RNA, adenine pairs with uracil and guanine with cytosine. A response A response To a condition or an injury. Then, the ribosome slides along the mRNA to the ³ c³don. Learning Competencies/Objectives At the end of this ³, you should: 1. Encourages development and nourishes the new individual Be familiar with the specific µ of each physical part using the table below: Examine the diagram in Figure 9 showing the front view of the female reproductive system. Â¢ How do hormones work to regulate various mechanisms within the human body? When translation eats, the mRNA binds to a ribosome. Retrieved 4 July 2014. from: doi/10.1371/journal Objective: Identify the main gl³dull glands in the human body and its µsProcedure: Study each image that portrays .onirc³Ãdne .onirc³Ãdne ametsis on ralucitrap aludn¢Ãlg amu ed otnemivlovne Together/all rights reserved. Remember that hormones are products that affect certain ³ of the body. Did you not know that menstrual ³ are the results of the strong contractions µ the uterine wall that occur before and during menstruation? D ePed C O PY 277 8. Q37. 39. Explain why a message that moves along nervous paths takes time. An increase or decrease in its value can have a significant effect on the human body. ³ and. Each combination of three nitrogenous bases in the mRNA molecule A c³don, a ³ of three letters for a specific amino acid. You cannot seek the assistance of your teacher in Mapeh in relation to Music, rhythm and beats of music. The uterus and vagina are in the middle, with a uterus on each side of the uterus. Make sure they are correctly placed. No part of this material may be reproduced or transmitted in any form or by any electronic or medical means, including photocopying³without written permission from the DepEd's central ³. rgRgA of preevaluationHow do nervous, end³ µcrine and reproductive systems play fun? 32. Ã¢ â¬ Â¢ The specificity of base pairing in DNA, adenine with thymine and cytosine with guanine allows DNA to replicate accurately. Let this arrangement represent the left half of your DNA molecule. Summarized evaluation — — 295 Gloss of terms — — 296 Referrals and Links — — 298 ³3: Biodiversity and evolution I. This number provides how many inches the ruler fell. There are twelve to fourteen billion neur µ in one part of the rebro. The following are the events as DNA copies: Ã¢ â¬¢ Step 1. soedÃtoelcun soedÃtoelcun sªÃrt ed opurg adaC .soninimef e sonilucsam sovitudorper sametsis son etnatropmi lepap mu mahnepmesed It represents a cycle in a DNA or MRNA that corresponds to a specific aminoid or an unemium sign. There are two types of mutation that can occur in cta as squids: Figure 9. When the first and second aminocts are in place, an enzyme adds them forming a peptanic connection between they. OLARTE, Marivic S. Pituitary G. What are the four nucleotan bases present in the TRNA? Yes, Mother. PILAR P. GATPO, Regaele A. Engineers tell workers how to make cars, and workers follow instruments to build cars. Q17. The hormones in the body are controlled by feedback. What represents? When finished, place the model of the translation process in the illustration or folder. Sântes I. The nervous system. Repeat steps 2 to 5 more five times using the left mother with eyes closed. Receives sperm male 3. Somjustic nervous system This system is associated with voluntary control of body movements and has two main parts: spinal nerves that carry the motor and sensory signals between the spinal cord and the body. Click on each option on the line on and off. Main concepts: Hormones play an important role in male and female reproductive systems. 7-8) OBJECTIVE: Â ¢ â € œHean response time to capture a overthrown object Figure 3. Q5. When you finish, assemble the original DNA model and the DNA model with your complementary tape on the illustration or folder. Aug signals the innio of protein sound. Source: www.scq.ubc.ca Figure 7. Code of color phosphate = blue, deoxiribose action = green and nitrogenous bases, as follows: adenine = yellow, thymine = pink, guanine = violet and cytosine = red. Why is mutations in sexual squares to be heredited? D EPED C O PY 235 5. Uracil TRNA base? What do hollow blocks represent? Q32. The axons transmit impulses to the dendrites of other neuron or the cellular body of the muscle squids. Cádon/s Counts for an amino acid? You have become familiar about how plants capture capture Since the sun and energy of storage in molÃ ©cula of aÃaccar through the photosynthesis and learned that the stored energy A© used by the cÃ ©lulas during the cellular breath. Pre-evaluation — — 264 IV. Reµn and note information on the different ways to stimulate the development of the cÃ ©rebro in children. 7. — 242 Activity 5: What went wrong? 13. Controls maturation and male characteristics 6. Q33. Nucleotides 2. The mRNA model is more like DNA tape from which it was transcribed? Learning Competencies/Objectives — -225 iii. You also learned how genes in your deoxyribonucleic acid (DNA) influence your traits. How do you not differentiate between the central nervous system (CNS) and the peripheral nervous system (PNS) in terms of their µ? The maximum duration of a video is three (3) minutes. (4 pts.) All rights reserved. Paratire³ide f. _____ 4. After that, you can also choose to use social media advertising to allow others to see your multimedia presentation. 44. 46. Monthly changes µ the female reproductive system are called menstrual changes. These sick squid carry less oxygen than normal squid. Record where the tuyp of your thumb is when you don't get the ruler. 5. OCAMPO, PhD printed in the Philippines by Rex Book Store, Inc. in RNA, Adenine labels with uracil and µcytosine binding with guanine. With which one did you not catch the fastest ruler when your eyes were open? Now, you will not work on activities to evaluate your understanding of the structure of DNA, explain how DNareplication occurs, how Ribonucleic acid (RNA) is made using the information µ in some genes are translated into prote- How mutations µ can cause changes in the structure and µ of a prote. What is a Cádon? Which gloon of the endangered system and E Does the system control the other glands in the body? READING RESOURCES AND MATERIALS OF THE NERVE SYSTEM The structure of the nervous system Figure 1. Explain how mutations µes can cause changes in the structure and µ of a protein. This plan Is DNA. Angeles, Liza A. The lateral transverse view of the reproductive system shows that certain parts of the male reproductive system are also part of the excretory system. Feedback mechanisms in the menstrual cycle: 1. Marcaida, Regaele A. IV. This cycle occurs every month since the first birth, which can happen when a woman is between 10 and 13 years old. Zero to tr Meanwhile, the ³ itself releases a hormone called estrogen, which causes the uterine lining to increase in thickness. High levels of one horm can inhibit the production of another horm. 2. Wounded, MA. Helen DH Catal, Vic Marie Camacho, Lilia M. But how do µ inform them in the DNA, which are found in the nucleus, move to the ribosome in the cytoplasm? 31. Measuring the time of realization all rights reserved. Pr³state angle c. Moreover, don't you know that there are three types of RNA that help to build proteins? In order for the rhyme and word play to be used, you cannot consult your teacher in English. 2. As message reaches the cÃ ©rebro, it processes the information µes and commands an effector such as a muscle or an A³rg to respond. It should be marked by day-to-day changes in the menstrual cycle. Stimulating folCon horm (FSH) helps in the maturation of folUcles and causes the strog secretion of folUcles. The axons carry impulses away from the cell body. (2014). Second, the Ã© ribose RNA. DNA has deoxyribose. The mother's internal reproductive ³ are located within the pelvis, between the urinary bladder and the rectum. DEPED C O PY 267 Procedure: 1. Source: InternalCampaignChools.org Figure 5.54. Â¢ â¬ Â¢ MUTANAThe chromosome occurs at the level of the chromosome, in generation of genes, duplication duplication rearrangement that can occur during the cell cycle and meiosis. Philippines: Vibal Publishing House, Inc Strauss, and Lisowski, M. Activity 6 Mark my calendar! Objective: To describe the feedback mechanisms involved in the regulation of the processes in the female reproductive system Materials: ¢ â € ¢ 2 calendar grains ¢ â € Â Â Â ¢ Scissors ¢ 3 Part A - No fertilization: 1. 10. The main types of arn include: messenger RNA (mRNA), ribosomal rna (rrna) and transfer rna (TRNA) . A change in the nitrogen base can produce a different aminoity and a corresponding alteration in the protein structure and function. Â ¢ â € ¢ How do feedback mechanisms help organisms to maintain homeostasis to reproduce and survive? Suppose there is no sperm. Color Code Phosphate = Blue, deoxyribose = green, green ribose = brown and nitrogen bases, as follows: adenine = yellow, uracil = orange, guanine = Violet, cytosine = red and aminoid = green. The nerve squids are called neuron. Inable high of a hormone can inhibit the production of another hormone. Consulted December 12, 2010 D EPED C PY 262 Public Library of Science (2004). When performing activity 6, you Â € ™ ™ capable of understanding feedback mechanisms in the female reproductive system. Activity 2 What is the speed of your reaction? To reach homeostasis, nervous and endangered systems maintain a normal range of the following variables: ¢ Number of metabnic waste at Ct © Lula ¢ Association Â € ™ ™ Alzheimer (2011). Each member of the "neurã´nioâ € Â Â Â Â â € Â s" must relay it to another one that reaches the last person of the group. Each nucleotan is composed of a phosphate group, a mold of the axion and one of the four bases in the “in the example. Neuron are especially intended Esu Ot Noissimrep Gnikees ni .4 Seidetna niatreck ecudorp ot ydob eht selbane .Seitlayor Fo Tnemyap eht noitdded our esop ,sgnniht rehto gnoma ,yay eciffo Ro ycnega hcussorp eht eted eth edat ,sam Eht Eht Ehnaro Evitcudor elam Eht .cni mada :secruos cinortcele smetsys nagro eht ,vi tinu âç¢ç ygolooib xtsys Evitcudorper , ¢ Metasys nagro âé¢Ã¢ç ygoloib :maeb)slairetam DepEd(.Mrof Evisausalp Eb tsum tsum taht oediv eht .noitalsnat fo nird nird nird nird nird ?dob eht satsoemoh niatniam ot tnatrop our yhw Metsys Evitcudo rper Elamef ehteru eht niruu cidic Fo ecart yna eht sezilartutotuton dna setacirbul taht sucum raelc dna kciht serces - neht Fo Trap in the degrahcsis taht diulthilk sam scamp sam seamtafamlaklaklakl

stamulum to survive. each) a b a. Key questions from this Mother: Before you start something, answer the questions of prize: III. Ribbon the clipping pattern forming nucleotans for the second chain of the molty DNA. I am to your partner to hold a Mother Room at the end with the highest sentence in cm. Homeostasis. 19. Then the TRNA dollars, each carrying a specific aminoid, approach the ribosome. Dendrites carry impulses towards the cellular body. Describe the feedback mechanisms in the regulation of processes in the female reproductive system. The space between neuron is called synapse. Sometimes errors occur in the replication of DNA, mitosis and meiosis. D EPED C O PY I Department of Science of the Republic of the Education of the Philippines Philippines was collaboratively developed and reviewed by educators from public and private schools, colleges, and/or universities. 4. What is the structural difference between DNA and RNA? Q26. Central Nervous System. This system is like a network that relays messages back and forth from the brain to various parts of the body. There are challenges to overcome in accomplishing the task such as the conflicting judgments of people on the issue that may cause various controversies. Introduction ----------263 II. But how are the right amino acids added in the right sequence to match the sequence of codons in the mRNA? pbio.0020115 Tamarkin, Dawn (2011). ¢ÃÂ¢Â The Peripheral Nervous System (PNS) contains all nerves that extend outside the brain and spinal cord. Do these bases differ from those found in mRNA? Write down the name of the endocrine gland and explain its effect, according to its function. Tape the cut out pattern to form the nucleotides. These hormones keep the reproductive system properly functioning. 64. Why is RNA important to the cell? Activity 1 Break it Down! (Adapted from DepEd Project EASE, Module 9: Life Support Systems, pp. It is important to clearly communicate your purpose from the beginning of the video. 59. 45. Q31. First Edition, 2015. Rosales, Nilo G. This condition is called hormonal imbalance. Garcia, Judith F. Health Science. Get another calendar marked by the day-to-day changes in the menstrual cycle. Proteins control the activities of the cell, as well as so the life of the entire organism. Look at the four DNA sequences of bases below. D EPED C O PY 246 B. 11. When the brain receives messages from the body about an internal change in one of its systems, it works to restore the system to its normal state. D EPED C O PY 269 The central dogma of the transfer of genetic information is outlined below. Now you will learn about the coordinated functions of the reproductive, endocrine, nervous systems. People affected by the disease end up dying. Pre-evaluation — — 226 IV. Read the information µ provided carefully on DNA and RNA. The ³ activity will familiarize you with the different disturbances of the end³crine system due to hormonal imbalance and responsible hormones All rights reserved. D EPED C O PY 270 QUESTIONS TAB: Q4. Recovered on 4 July 2014 from: The human nervous system Sandrocastelli.com TooLoop.com health.allRefer.com semfoundation.org All rights reserved. _____ The pituitary gland releases horms that make the egg in the womb mature. First, the single-strand RNA - while the double-strand DNA. Figure 7. The order of the mRNA bases determines the unsynthesized prote. Now, test your understanding of the basic organization of the nervous system by doing the activity1. This control system usually brings slow changes in the body, because the messengers that are humic move more slowly than the nerve impulses. Therefore, it is important to be objective in presenting idÃ© ias instead of being subjective. The "Brain" must think of a response to the presented Massive and pass that response to the "motor neurons". tests and divide them by the number of tests. The process of making copies ³ DNA is called replication. When a hormone in the blood reaches the target ³, it produces an undetectable effect. Color ³ Phosphate = blue, Ribose chase = brown and nitrogenous bases as follows: adenine = yellow, uracil = orange, guanine = violet and cytosine = red. To survive, an organism must be able to respond to a Stimulus. Main µ and parts of the nervous system 1. (1 pt. KEY CONCEPTS: The endocrine system consists of glands that secrete chemicals called hormones to control various body processes. Retrieved July 5, 2014 from: KG Investments (2014). The experiments of Beadle and Tatum linked genes to actual products of cells and showed the importance of genes to cellular activity. With your DNA model in front of you, demonstrate the process of transcription by first pulling the DNA model apart between the base pairs. Alvarez, Dave G. Salazar Layout Artists: Matthew Daniel V. D EPED C O PY 234 Materials: ¢ÃÂ¢Â metric ruler ¢ÃÂ¢Â data chart Procedure: 1. A stimulus is received by the body and a response is made. Note that certain events are marked on certain days. You can consider these RNA molecules to be the workers in the production of protein. You have also understood the structure of genes and chromosomes, and the functions they perform in the transmission of traits from parents to offspring. Chemicals from these glands nourish the sperm cells and help them mature. 66. Design a flyer that will disseminate information about the different diseases affecting the human nervous system. ¢ÃÂ¢Â Neurons have the special ability to carry signals or impulses. Location in the cell 3. 1. MUTATION: Changes in the Genetic Code When you copy from the blackboard, sometimes you may make mistakes. D EPED C O PY 225 COORDINATED FUNCTIONS OF THE NERVOUS, ENDOCRINE,AND REPRODUCTIVE SYSTEMS Suggested time allotment: 12 to 14 hours I. Additional male hormones are produced in the testes while female hormones are produced in the ovaries. Build a model of a strand of a DNA molecule. The follicles produce hormones that control the growth and release of eggs from the ovaries. Q39. Use the patterns of the components of the DNA and RNA provided by your teacher. These senses aid in the survival of human beings. Place the diagram in the space to the right of the corresponding D EPED C O PY 278 In translation, each set of three nucleotides in an mRNA molecule codes for one amino acid in a protein. This difference is enough to cause serious and often fatal diseases. Summary/Synthesis/Feedback ----------257 VI. This control system usually brings about slow changes in the body because chemical messengers move more slowly than nerve impulses. ----------306 Activity 2: AHA! Analogous! Homologous! ----------310 Activity 3: So, Who is My Relative? Among the members of the group, assign students who will represent the following parts: Brain, Organ, Sensory Neurons, and Motor Neurons 3. Unsequenced events in the menstrual cycle All rights reserved. It is essential in regulating growth and development, metabolism, as well as reproductive processes and mood. Q7. 21. Do the same with the other codons in the chart. What is the role of tRNA in protein synthesis? How important is the thymus gland in keeping your body free from diseases? D EPED C O PY 263 Suggested Time Allotment: 8 hrs. Unit 3 MODULE 1 All rights reserved. AUG codes for the amino acid -methionine. Activity 2 DNA Makes DNA Objective: ¢ÃÂ¢Â Make a model of a DNA template to determine the sequence of bases in the new DNA strand. Others are joined together to form organs like the brain and spinal cord. Each codon specifies a particular amino acid. Hormones have great impact on your growth, appearance, emotions, and reproductive functions. Prepares the body for action, and controls the heart rate and breathing in times of emergency 5. How does the structure of a DNA molecule help account for the great variety of life that exists on earth? Refer to Figure 11 for a clearer explanation of the different events that take place in the cycle. 24. What condition may arise if the pituitary gland is not producing enough growth hormones? 30. The endocrine system influences how your heart beats, bones and tissues develop, and even your capacity to have a baby. Mutagens are commonly in the form of toxic chemicals, and harmful radiation. Figure 5. D EPED C O PY 236 KEY CONCEPTS: Neurons have the special ability to carry signals or impulses. Part Function Ovary produces egg cells Oviduct serves as passageway of eggs from the ovary to the uterus; site of egg fertilization Uterus serves as site of egg implantation; is where the fertilized egg develops Vagina receives the penis of male during mating Puberty involves the onset of sexual maturity and the ability to reproduce. Hormones control many of the changes in the reproductive system. How will the hormones (insulin) from her pancreas help her body cope with a possible blood sugar level rise above normal? 56. 37. They are not in proper order. Stimulation Crucial to Devt. Figure 7 summarizes the translation process. Changes in the DNA sequence may delete such protein or change its structure. 2nd ed. D EPED C O PY 243 Guide Questions: Q15. The ¢ÃÂÂOrgan¢ÃÂÂ must pass the message to one ¢ÃÂÂSensory Neuron¢ÃÂÂ by whispering. Basilla, Jose Leo Vic O. 27. 3. When a female reaches puberty, egg cells start to develop in her ovaries that produce the sex cells. D EPED C O PY 223 UNIT 3 Living Things and Their Environment All rights reserved. 23. D EPED C O PY 239 Guide Questions: Q8. Make a copy of the diagrams of the menstrual cycle like in Figure 12. D EPED C O PY 257 V. The uterine lining becomes thicker so that the fertilized egg can attach to it. The team with the most acceptable answer and the shortest time of trip will win the game. Generally, the endocrine system is in control of the mechanisms in the body that slowly take place, such as cell growth. explain how a protein is made using information from DNA. Answer the following questions as you work on the activities in this module. Hormones act in very small amounts. Q2. Marcaida, Ma. Regaele A. During the first three years, a child¢ÃÂÂs brain triples in weight and approximately 1,000 trillion µ of nerve µ. Q27. If the level Â is found in the blood of a person Â instability, what glands may be involved in the problem? DNA RNA 1. D EPED C O PY 229 Your nervous system connects all your parts of the body and transmits signals from one part to another. 9. P24. P9. _____ For example, a mutation in the protes of the blood prevents viruses or parasites from thriving in host organisms. Â¢ Step 2. Cerebellum ÃÂ the part under the recumbent that controls posture, balance and coordination. All means to obtain authorization to use these materials have been exhausted. These are the dendrites and axons. 22. Fol-stimulating hormone (FSH) stimulates victims to release estrogen. If the ³ and hormones do not produce the regulated amount of chemicals in your body, this may result in an abnormality of your body. notified body.
